

9.24.040 – Application of noise standards

For purposes of this Chapter 9.24, a noise shall be determined to be “clearly audible” when noise generated by a Noise-Generating Activity can be heard and readily differentiated from any ambient noise in the vicinity, including noise generated by vehicle traffic. A noise that is “clearly audible” may be constant, recurrent, or intermittent.

Locations used to determine if a noise is “clearly audible”:

- A. Property line: Noise shall be measured outside along the perimeter of the property, including within the public right-of-way adjacent to the property line.
- B. Perimeter of the dwelling unit: Noise shall be measured inside or outside the building at a location adjacent to the unit, including common use hallways within the building.
